## **NumPy Exercises**

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

```
Import NumPy as np
```

```
import numpy as np
```

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

Create an array of 20 linearly spaced points between 0 and 1:

# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T # BE ABLE TO SEE THE OUTPUT ANY MORE

4, 5],

In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW

# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T

In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW

# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T

Numpy Indexing and Selection

Now do the following

Get the standard deviation of the values in mat

7.211102550927978

Get the sum of all the columns in mat col\_sum=np.sum(mat,axis=0) In [29]:

> col\_sum array([55, 60, 65, 70, 75])
